

RECRUIT

Recruit via demographic pre-selection form — outside the app

age (18+) · gender · occupation · fandom (ARMY / BLINK) · years of fandom · language · consent
No study-purpose disclosure anywhere — participants are only told what to do. Target strongly identified fans.

Random assignment · demographics matched across arms

balanced ARMY / BLINK per arm · ≥ 30 per arm (power analysis)
language cells run entirely in English or entirely in Chinese (no mixing)

EXPERIMENT · community note

CONTROL · inert feature

Group session (~1 h) on the Reddit-style forum — identical in both arms

Rival fandoms post together on seeded, discussion-provoking prompts; all posts logged; no feature present.
Toxicity / polarization must be HIGH before any intervention — otherwise Day 1 repeats with new prompts.

R1: baseline HIGH ✓
repeat until high

 **Survey 1 (short, end of day)**

Community Note in-feed

Cross-fandom co-creation task: one ARMY + one BLINK pick to publish a joint, co-credited community playlist.
LLM: template · pair · assemble verbatim (disclosed)

Inert solo feature (poll)

Same look & placement, but solo and non-collaborative — NO cross-group pairing, no shared output.
comparable engagement, mechanism removed

R2: control stays HIGH ✓

 **Survey 2 (end of day)**

Feature removed — same forum, same prompts, both arms

Does the Day-2 effect carry over on its own? Posts logged; toxicity scored per message.

 **Survey 3 +  semi-structured exit interview**

R3: drop ONLY in expt ✓
